A On a T read C primer has two ways to align a read, on higher quality reads it takes the one with a gap

Real primers and CCC anchor; read positions on top. Gap = 6 + 2 = 8 points.

B Which option is cheaper depends on read quality

Points lost by the C primer: mismatch option vs gap option

C Systematic error on the big dataset

BICF2G630340139: reads removed by the position disagreement rule by SNP base quality
