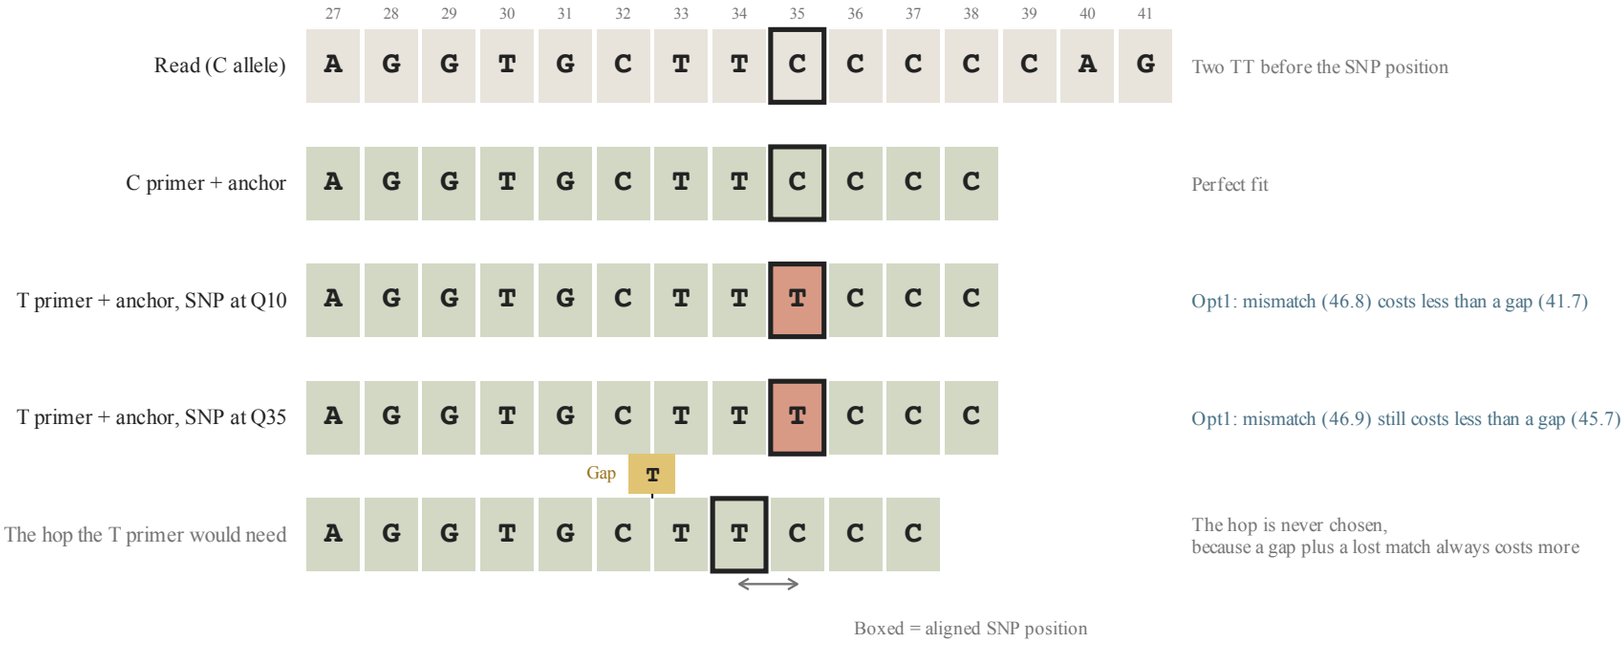
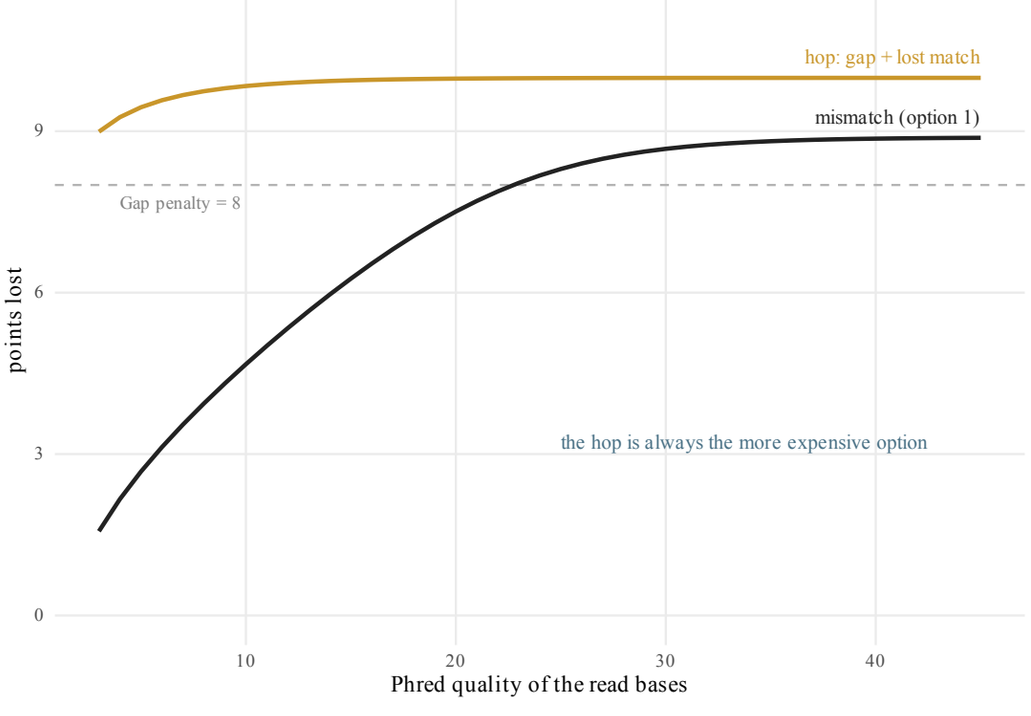
A On a C read the T primer never hops: the hop would cost more than the mismatch it avoids

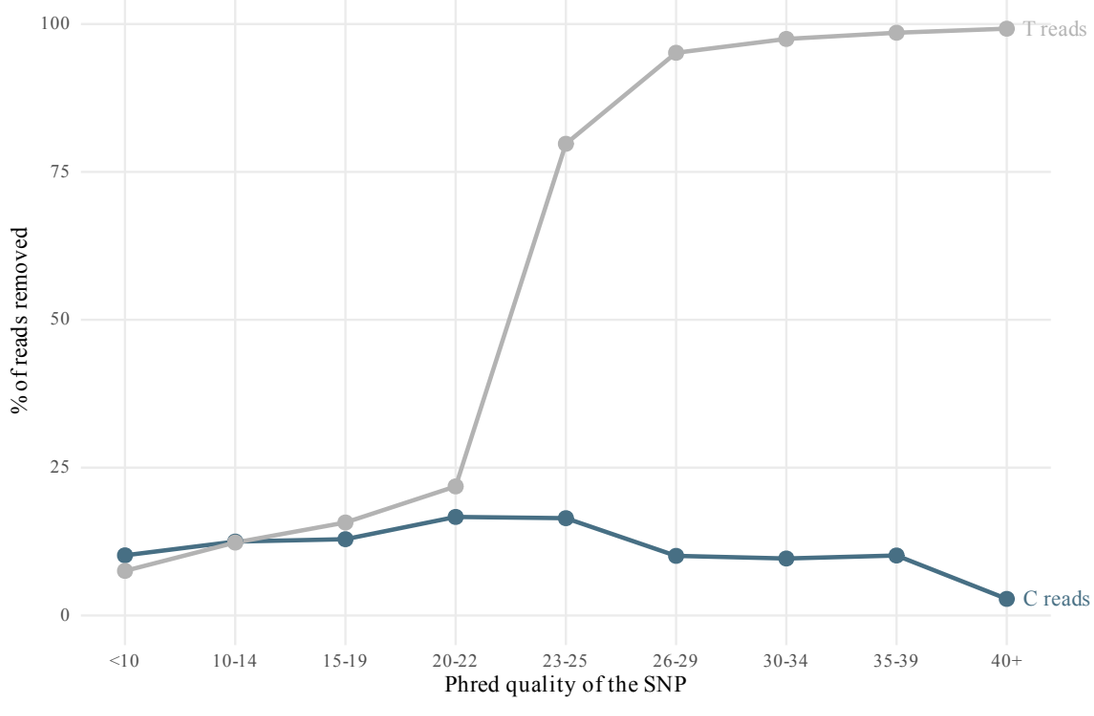
Real primers and CCC anchor; read positions on top. Gap = 6 + 2 = 8 points.



B The two lines never cross

Points the T primer loses on a C read, compared with a perfect fit



C The big dataset: C reads stay hidden


BICF2G630340139: reads removed by the position disagreement rule by SNP base quality
