Called genotypes with ≥ 10 voting reads on each strand: 750 of 777 pairs

A All alleles: forward vs reverse strand

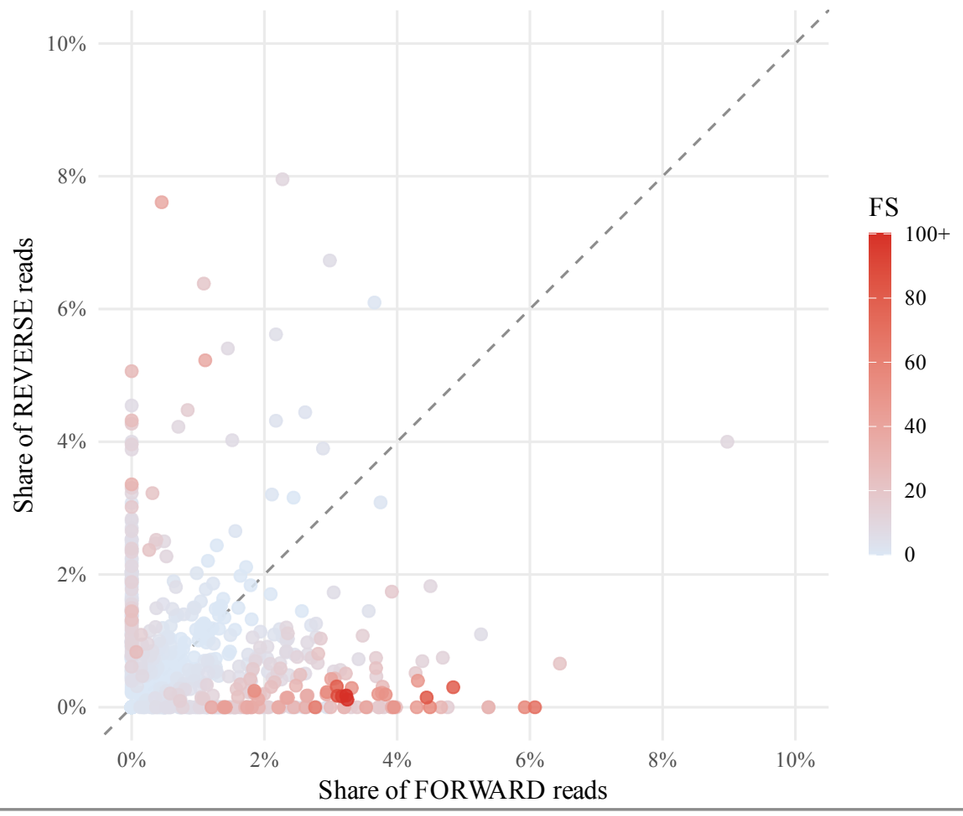

B All alleles: frequency vs strand asymmetry (fwd - rv) / (fwd + rv) [%]

C Minor alleles, zoomed to 0-10%

Error reads of homozygous calls, coloured by the pair's Fisher strand score (FS).
GATK hard-filters SNPs with FS > 60: 11 of 750 pairs (1.5%).

D Minor alleles, zoomed to 0-10%

The same points, coloured by the pair's strand odds ratio (SOR).
GATK hard-filters SNPs with SOR > 3: 113 of 750 pairs (15.1%).
